

GMI is proud to partner with AMTECH for a wide range of solder needs. As a contractor we must deliver the product performance customers expect. Additionally, we must take advantage of time saving flexible process windows and forgiving cleanliness constraints in order to meet aggressive delivery schedules.

The AMTECH LF-4300 paste has provided us with performance and timesavings we have come to expect with AMTECH paste materials. Optical and X-Ray joint inspection bear this out. Furthermore, cleanliness is just not an issue.

Today we are processing a 4"X5", no-lead, 516 component, multiple BGA, QFN, odd forms, IC s and passives assembly on one line and a single sided SN63, 28 component assembly on the other line using the 4300 series paste. There just aren't any soldering or cleanliness issues diverting our attention from other projects.
